

Streamlined Cooler Management

Now you can quickly and accurately ship orders with complete traceability and inventory visibility. From the moment products are received at your cooler until they are successfully shipped to your customers, RedLine Cooler™ records and updates product inventory, movement, order picking, and shipping transactions in real-time. The net result is fewer errors, improved inventory visibility, and more trucks shipped.

Real-Time Visibility

Traditional paper-based methods slow down your operations and are prone to human error. RedLine Cooler combines our practical software with reliable mobile and wireless hardware. This solution allows workers to view information and record their actions when and where the work is performed. RedLine Cooler's integration with Famous Software validates all actions in real-time, catching errors before they occur.

Accurate Order Fulfillment

Help your team move faster and ship more orders. Capturing information with wireless scanners means you no longer have to key in pallet tag IDs in the office. This saves time and eliminates handwriting and data entry errors.

- Directed picking and shipping rules optimize order fulfillment, increasing speed and accuracy
- Specific order requirements are highlighted on-screen
- Substitutions are flagged, ensuring only "legal" substitutions are allowed
- Real-time validation of all actions eliminates errors
- Pallet consolidation tracks pallet changes at the case level
- Individual pallets can be reserved for specific orders

Key Features

- Part of RedLine's Whole Chain Traceability Suite
- Fully PTI compliant—now and in the future
- Validated order picking and shipping
- Hybrid pallet tags are printed from mobile devices
- Paperless truck inspection linked to sales orders
- Improved visibility to process and treatment tracking
- Enhanced reporting for productivity, traceability, and audits
- Intuitive user interface in English or Spanish

"RedLine Cooler improved our inventory integrity and reduced our average load time by 20%."

Real-Time Inventory Control

RedLine Cooler manages inventory with wireless scanners ensuring complete and up-to-date inventory visibility, reducing waste and write-offs.

- Every action is recorded and passed to the accounting system as it happens
- Inventory inquiries display information organized for the way you work, including views by product, grower block, lot, pallet, or location
- Physical inventory counts on the wireless device are fast and accurate, enabling nightly reconciliation
- Manage product availability from the mobile scanner
- Treatment logging captures treatment details and resource utilization

Real-Time Traceability

RedLine Cooler automatically tracks detailed information at case, bin, and pallet level, meeting and exceeding traceability requirements.

- Records GTIN and Lot ID at the case and pallet level ensuring PTI compliance
- Generates hybrid pallet tags on demand
- Order traceability means you know which customers received a specific GTIN and Lot
- Tracks and records the location of every pallet or bin within your operation as well as its movement through your cooler
- Pallet audit trail offers a complete history of its movement through the cooler, including who took what action where and when
